CAREER OBJECTIVE

Computer Science (Data Science) graduate, entry-level web developer with a strong foundation in building responsive, user-friendly websites using modern web technologies. Experienced in creating clean layouts and deploying static and dynamic websites. Comfortable learning new tools, solving technical issues, and working in structured environments. Eager to grow professionally while contributing to simple, reliable web solutions that support business needs.

EXPERIENCE & PROJECTS

Thaksa – E-Learning Web Application

Designed and built a full-stack e-learning platform using the **PERN stack** (PostgreSQL, Express, Node, React).

Vision-Based Terrain Classification – Major Academic Project

Developed an end-to-end machine learning and deep learning software prototype for terrain classification using image data. Implemented OpenCV and MobileNetV2, along with classical machine learning algorithms such as Logistic Regression, Naive Bayes, Ridge Regression, and XGBoost. Focused on data preprocessing, model evaluation, validation, and accuracy testing.

MERN Stack Project – Spotify-Style Application

Built a full-stack web application with authentication, APIs, and database integration. Gained exposure to backend validation, API testing, and data consistency checks.
